

Dear GMI customers,

From the Technical Department of our company, we want to share with you important information about our products and their compatibility with devices from other brands in the dental sector.

At GMI we take the quality and safety of our products very seriously. For this reason, we want to emphasize that our products have been designed and manufactured with the highest precision standards and have been subjected to rigorous tests to guarantee their optimal performance and safety.

However, it is important to note that our products are not compatible with devices from other brands in the dental industry. This is due to technical reasons, such as the dimensional tolerance, which has been optimized to work seamlessly with other GMI products.

For this reason, the use of GMI products with devices from other brands has not been verified or validated by us and could represent a risk to the health of the patient. Therefore, our company cannot guarantee the success of treatments in which GMI products are used in combination with devices from other brands.

We want to remind you that GMI cannot be held responsible for the results of clinical cases in which the manufacturer's instructions have not been followed, including the use of original GMI products. Therefore, it is important that dental professionals follow the instructions for use and the indications of the manufacturers to guarantee the safety and success of the treatments.

In short, at GMI we are committed to the quality, precision and safety of our products. For this reason, we strongly recommend using our products exclusively with other GMI products and following the manufacturer's instructions to guarantee the success of the treatments and the safety of the patient.

We appreciate your trust in our company and we remain at your disposal for any questions or queries you may have.

Sincerely,

Technical Management of GMI Dental Implantology, SL
